

The H_g seat: the icosahedral 12-shell natively carries the two GW polarizations
(all five $l = 2$ harmonics: rank 5/5 resolved; orthogonal to $l = 0, 1$ to $9.2\text{e-}17$)

+ polarization: $x^2 - y^2$ ($m = \pm 2$)

× polarization: xy ($m = \pm 2$)
